

USP CODE EVALUATION REPORTS ACCESSED QUICKLY FROM OUR WEB SITE

Quickly search for code evaluation reports by USP Stock Number to determine all relevant code approvals for a specific product.

Most USP structural connectors have been evaluated or are in submittal stage for evaluation from one or more of the following code authorities:

- ICC-ES
- NER Legacy Reports
- ICBO Legacy Reports
- SBCCI Legacy Reports
- BOCA Legacy Reports
- City of Los Angeles Research Reports
- State of Florida Product Approvals
- Miami Dade Notice of Acceptance
- DSA – State of California

Products without a code evaluation listing are identified as follows:

- *No code listing. Contact USP.*
- *Product is not load rated and code approval is not required.*
- *Meets prescriptive code requirements.*
- *Submitted for code approval.*

Most of these code authorities evaluate some or all of USP's structural products. Other code agencies may require specific reductions and limitations. Any questions about current code evaluation reports should be directed to the USP Technical Support staff. USP continuously updates code evaluation reports to reflect new standards and requirements; visit USP's Web Site, Technical Resources > Code Evaluation Reports web page <<http://www.USPconnectors.com/codereports.htm>> or the specific code agency's web site for current listings.

FIND CODE EVALUATION REPORTS BY USP STOCK
